

CERTIFIED ORGANIC T-SHIRTS - imprinted with organic ink

SUPPORT EARTH DAY, NASA, U.S. JOBS, U.S. FARMERS, SMALL BUSINESS, & YOUR EARTH !
... simply by buying a T-shirt !

Made in the USA, all the way!

Gary and LaDonna Oldham grow cotton on their family farm in Samnorwood, Texas (population: 30).
Harvested cotton is ginned to remove the seeds and burs at a local cooperative gin.
Bales of cotton are sent straight to a nearby textile mill in a small Texas town.
The milled yarn is knitted into fabric at a southeastern U.S. knitting mill, and shipped back to the farm.
Back at the farm, Lou Ann and her helpers cut and sew the fabric into T-shirts.
U.S. jobs are supported all along the way, and fuel for shipping is conserved!

Small family business

The Oldham family has been growing cotton in Texas for over 100 years.
Gary's grandfather broke prairie grassland to plant cotton in the rich soil.

100% organic cotton - Certified organic by the Texas Department of Agriculture (TDA).
This means that the cotton & T-shirts are produced without synthetic substances - no dyes or bleaches are used.
Also, only environmentally preferable nonsynthetic substances are used, as needed.
Organic farming includes crop rotations & enhancing the habitat for beneficial insects.

100% organic ink - by Planet Ink

Most silkscreeners use plastisol, which is melted plastic, and is not biodegradable.
Planet Ink spent two years gathering & testing different combinations of natural colors.
- Saps, oils, roots, vegetables, kelps, and starches, along with organic pigments.
Compounds were tested and found to cause no imbalances in the air, land, or water.
It is safe for the printer, the wearer, and is completely compostable in its afterlife.

~~~~~  
Both the shirt and the ink will eventually be returned to the earth safely. WEAR IT PROUDLY !  
~~~~~

Additional shirts are available at: <http://earthday.grc.nasa.gov/>

Printed on reused scrap paper (30% post-consumer recycled content).
Can be recycled again !
